

One Pager Product Proposal

A one page(r) or sometimes also one sheet(er) is a document that summarizes the key information about your business, product, service or idea on one page or on one sheet. The idea is to give readers (potential customers, partners, etc.) an overview of the most important aspects they need to know about without going into too much detail. Writing a one pager therefore means that you need to write in a concise style, similar to what you already know from writing an abstract. Adapt both language and content to the target audience (vocabulary, technical details) but always use a professional semi-formal to formal register.

Basic requirements for PM4:

- One page of text (incl. title, possibly excl. figure and reference list: if you have a figure that needs space for readability, use the second page (the “back side”), but make sure you reference it in the text. List sources on page two in a separate reference section.)
- Standard formatting including header, footer, ZHAW logo.
- Reference list (at least 2 sources that anchor your project), IEEE Format
- One figure that visualizes your product idea and its main features in the form of a diagram (e.g. flow chart), drawing or 3D-rendering. Key elements need to be labeled or numbered and discussed in text.

Suggested sections and rough distribution:

- Problem (Introduction) 1/5
A short introduction to the context, including the potential problem you are addressing. State why your product adds value and for whom.
- Solution (Your Product) 3/5
An overview of your proposed product with its main features and possibly innovative approaches.
- Plan (Needs & Outline) 1/5
A brief overview of additional materials and resources you need and a rough outline how you will achieve your goals.
