

ET.PM4 – Video Presentation (SW9)

The purpose of your video presentation is to demonstrate the main features, key hardware components etc. of your radar sensor.

Requirements:

- Length of video is 2-3 minutes
- Provide an informative title slide (project, affiliation) as well as a final slide (authors, date, links etc.)
- Present main features at the beginning (e.g. problem-solution or use case); repeat the main features on final slide with ranges and resolution/accuracy
- Include main aspects of your project in the video presentation:
 - Introduction/goals
 - overall concept (e.g. Doppler)
 - signal processing
 - user interface
 - additional features/USP
 - summary of main features with ranges, resolution/accuracy
- Include both static images as well as video recordings
- Use minimal text (and possibly voiceover) to present your project
- Be certain that your video is free from misspellings and inaccuracies
- use an external microphone (e.g. headset) to ensure good audio quality (for voiceover)
- Submit video presentation as MP4

Suggested Software:

- Creating animations in PowerPoint:
https://www.youtube.com/watch?v=oq7XGI_kqrQ
- Video editing software (DaVinci Resolve 20)
(<https://www.blackmagicdesign.com/products/davinciresolve/>)
- You may also use other video editing software (e.g. Camtasia, iMovie)
- Producing voiceover: <https://www.voicebooking.com/de/kostenloser-voice-over-generator> (the free version is limited to three downloads in total; hence, when two people register six downloads are possible. Alternatively, the voiceover can be recorded in one piece and then cut apart)
- Make sure to use royalty free music (if included) and provide sources for images.
