ET.PM4 – Video Presentation (SW9)

The purpose of your video presentation is to demonstrate the main features, key hardware components etc. of your radar sensor.

Requirements:

- Length of video is 2-3 minutes
- Provide an informative title slide (project, affiliation) as well as a final slide (authors, date, links etc.)
- Present main features at the beginning (e.g. problem-solution or use case); repeat the main features on final slide with ranges and resolution/accuracy
- Include main aspects of your project in the video presentation:
 - Introduction/goals
 - overall concept (e.g. Doppler)
 - signal processing
 - user interface
 - additional features/USP
 - summary of main features with ranges, resolution/accuracy
- Include both static images as well as video recordings
- Use minimal text (and possibly voiceover) to present your project
- Be certain that your video is free from misspellings and inaccuracies
- use an external microphone (e.g. headset) to ensure good audio quality (for voiceover)
- Submit video presentation as MP4

Suggested Software:

- Creating animations in PowerPoint:
https://www.youtube.com/watch?v=og7XGI_kqQ
- Video editing software (DaVinci Resolve 20)
(<https://www.blackmagicdesign.com/products/davinciresolver/>)
- You may also use other video editing software (e.g. Camtasia, iMovie, Clipchamp)
- Producing voiceover: Use one of many free TTS tools online with voice parameter settings, such as: <https://luvoice.com/>
- Make sure to use royalty free music (if included), provide sources for images and declare use of Gen-AI.

PM41

Requirements: Length of Video

- Length of video must be 2-3 minutes
 - Focus on main aspects of your radar sensor (e.g. main features)
 - Leave out details (e.g. describing every single component of PCB)

Source: wistia.com

Requirements: Title Slide

- Provide an informative title slide
 - Name of project (must be informative and specific; not «Radar Sensor»)
 - Affiliation (ZHAW logo) -> See pool for current PPT template as guideline

Requirements: Final Slide

- Provide further information on final slide
 - Names of authors / Institute
 - Year
 - Links etc.

Winterthur, 2015

Requirements: Final Slide

- Provide further information on final slide
 - Consider PPT template (optional)

Requirements: Visualisation

- Use both static images as well as video recordings
 - Use static images to present diagrams, charts, PCB layout etc.
 - Label main components without going into details

Requirements: Visualisation

- Use both static images as well as video recordings
 - Use animation to illustrate processes, features etc.
 - Use minimal text to explain processes, features etc.

Requirements: Visualisation

- Use both static images as well as video recordings
 - Use video recordings for illustration and demonstration purposes.

Requirements: Visualisation

- Use both static images as well as video recordings
 - Use video recordings for illustration and demonstration purposes.

Storytelling

Just like in a good presentation, you take your viewer on a journey.

Gen AI

What works well, what needs adjusting?

**Groundbreaking
speed
measurement**

Microsoft Copilot

Remember: generative use of AI needs to be declared.

Grading (Language)

- 10% of PM4 grade

...of which:

1/3 Language (Correctness, Adequate Complexity)

1/3 Text-Audio Integration (Balance, Pace, Content-Matching, Volume, Formatting)

1/3 Narrative Format (Structure, Storytelling)

Deadlines:

- Script: next week (Wed/Thurs), @huar only
- Final video: 22.5.
