

Demonstration

Aims of a Demonstration

1. Highlight your product's key features and benefits in 10-12 minutes.
2. Answer the questions that your prospects or customers may have.

Structure

- Keep the overview very short
(e.g. “We will describe the main features,
show the hardware and demonstrate...”)

- repeat main feature
- invite questions

Introduction

- Problem-solution structure
 - Briefly frame the issue.
 - Provide the solution and explain the benefits of it.

Conclusion

- Structure
 - Make it clear that the demonstration is over
 - Repeat key ideas and/or highlight benefits of your product
 - Invite questions

Structure: Signposting

Williams, Erica J. (2008): Presentations in English. Find your voice as a presenter, p.17.

Signposting: linking words

Beginning a new part

So, let's start with...

Moving on now to... / Now, let's move on to the second part of my talk.

This brings us to my next point. / The next issue/topic I'd like to focus on is...

I'd like to expand/elaborate on...

Let's take a look at... / Let's turn to ... now.

Going back

As I mentioned earlier, ... / As I've already explained, ... / As I said, ...

(→ see handout on the pool)

The function of linking words (written vs oral communication)

written

vs

oral

1. Introduction

A Cable Monitor is an electronic measuring device. With the help of the Cable Monitor it is possible to measure the distance and the angle to a cable in which current is flowing. In addition to this basic function, the Cable Monitor can measure the current in the cable. With electronic components the Cable Monitor can detect the electrostatic field on the one hand and the electromagnetic field of a current-carrying cable on the other hand. With these values it is possible, by using analog signal processing and digital algorithms, to calculate the distance and the angle to the cable and the current inside. In this documentation the hardware is explained in detail, which is necessary to perform such measurements.

“Good afternoon, ladies and gentlemen.”
“The focus of today’s presentation...”

2. Specifications

This section explains the basic functions and additional functions of the Cable Monitor. Afterwards the functions are explained in detail. Also, the complete hardware structure is explained.

“ I’d like to begin/start by... Then... /Next, ... Finally, ... “

2.1. Basic Functions and Additional Features

The Cable-Monitor must fulfil these requirements (Basic Functions):

- Detect a mains cable at a distance up to 200mm
- Display the distance to the cable in the range 5mm to 100mm with a precision of $\pm 30\%$
- Display the angle to the cable in the range of $\pm 45^\circ$ with a precision of $\pm 15^\circ$
- Battery powered, preferably with auto shut down when no longer used
- Menu with these items
 - Start single measurement
 - Start accurate measurement (averaging: mean and standard deviation)

The Cable-Monitor has these additional features:

- Display current in the range of 1A to 10A with a precision of $\pm 50\%$
 - for a single phase wire (at mains potential) up to a distance of 10mm
 - for a cable with phase, neutral and protecting earth up to a distance of 5mm
- Alarm
 - when cable distance is too big (= cable is disconnected)
- Optical Distance Indicator
 - five LEDs visually illustrate the distance

“Let’s consider this in more detail.”
“The significance of this is that... “

→ also use pauses to indicate a new section/part of your presentation

Demonstration

Demonstration

Example

(source: <https://www.youtube.com/watch?v=JjVJgfTrLF8>)

Demonstration

Typical issues:

- basic features not demonstrated
- display not visible
- sound overlaps with talking
- issues ignored
- product manipulation not explained
- elements not ready

Demonstration: Tips

- Create a script for your demonstration (same as for video)
- Decide on who is going to demonstrate which part and use transitions («And now, Mr Müller will demonstrate....»)
- Make sure necessary details are visible (e.g. measurements on display)
- Remove any objects from the table that are not necessary for your demonstration (e.g. cables etc.)
- Use appropriate/formal terminology and provide specific facts/measurements («The distance measured is 5.4 m...»)

Demonstration: Tips

- Use assertive speech («The display shows...» or «The distance measured is...») and avoid relativising language («would», «could», «probably» etc.)
- Also point out main limitation(s) of the device
- If there's a feature that is not fully functional yet, show the current state of the feature (e.g. show voltage ramp needed for FMCW)
- Use only minimal aids (e.g. flipchart) that support your demonstration
- Practice demonstration as a group several times and put yourselves in the audience's shoes
- Use pointing device

Grading

- 1/3 Language (Vocabulary, Pronunciation, Grammar, Fluency)
- 1/3 Structure/Timing (Logical sections / flow, Timing respected)
- 1/3 Delivery (Use of body/voice, Use of tools, Audience-consideration)
